

Save through controlling and managing your warehouse

" Professional and userfriendly software as the basis for a sophisticated way of working."

As a third-party logistics provider you want to control and manage the stocks in your warehouse. Your customer outsource logistics to reduce costs and investments and the processing times of orders. Good software provides efficient business processes and combines purchasing, sales and finance.

As a software supplier RPO has developed software for logistics services. Our 3PL package Logisticsng integrates transport, storage, handling and reverse logistics. It is standard software, but can be tailored to meet an individual organization with the addition of extra features. For example, for full stock control, we can also offer a complete WMS solution. But we can also provide customized software.

Profitable ICT solution for storage and handling

3PL software is suitable for storage and handling companies. Control and manage the stock in your warehouse, with WMS, RF scanning, Forwarding and as additional functionality Transport (inbound and outbound). With our software, logistics costs are kept as low as possible. It also keeps the processing times of the warehouse and distribution as short as possible. Our complete solution gives you more control over your business. More insight information and saving time and money.

Logisticsng: 3PL software

- Set to pallet storage
- Online availability
- Standard proven software

Features:

Our software is set to the pallet storage. This is the basis for the costs that will be calculated. In our software the incoming and outgoing goods are recorded and monitored. The total solution grows along with the user depending on the complexity of the processes. The data can be read out from your (ERP) software. And all this, of course, on the principle that data needs to be entered once.

Online availability

By a login option on our website Logisticsng, your customers have the ability to view their current stock online, you can request the full course of an incoming stream itself. Always real-time information for them available. This will work effectively and efficiently.

The distinctive ability of Logisticsng, 3PL software:

1. Standard proven software.

The software RPO is fully aligned with the prevailing standards of logistics and business. You will benefit from ease of use and continuity. It is also possible to add additional functionality, such as WMS and transport planning. And if the standard for your specific organization is not sufficient, it is also possible to customize the software.

2. Easy communication with your client.

Both you and the client can view stocks and options at any time, always real-time information. Your client has more control over the business operations through the ability to view online statements and to run.

3. Productive and efficient.

By working with the right software, you reduce the error rates. And because of the principle the measure is to know you have more engagement and higher productivity.

4. Good service providing.

Making money with logistics can be done by providing good service and more customer contact. The inspection continues with customers, it is automated, but there is always a possibility to adjust manually, this is in contrast to the other 3PL software.

5. For various specializations and methods.

Our software is suitable for companies that deal with a fresh product. The various methods of testing and the procedures have of course also received attention.

RPO ICT Solutions

RPO is your reliable ICT partner for now and in the future! Through our innovative approach, we are heavily involved with our customers and we focus our products and services on the achievement of specific objectives. All this with a passion for the job.
